

A conservation scientist is someone who manages the overall land quality of forests, parks, rangelands, and other natural resources. They work with landowners and all levels of government to devise ways to use and improve the land while safeguarding the environment. All of these scientists make complex decisions to come up with plans that balance economic goals with environmental impact -- and meet government regulations. Conservation scientists manage natural resources, such as rangeland and water. They develop programs that both make resources productive and protect them.
