Abstract

Debates about the value of applying corrective feedback in language teaching and learning has been prominent in the recent years by respecting the past, understanding the current values, proofs and directions and finding new perspectives to change the future of corrective feedback (CF). The purpose of this article is to examine how CF found its way through the history of its development from 1950s to the new millennium and to present a review of CF in English language teaching. A close look at the history of CF helps teachers and researchers become familiar with different views about the CF and change their methodological perspectives on CF and try to apply the research findings to language pedagogy. The article concludes with some general suggestions about standard ways of receiving feedback by students, the development of CF through complex systems, and the development of CF for specific purposes.

Keywords: corrective feedback, 1950s, 1960s, 1970s, 1980s to new millennium

INTRODUCTION

The current familiar term "Corrective feedback" has been variously named in the history of the fields of second language teaching and learning, linguistics and psychology and unfortunately "to a large extent, researchers in these three approaches have been isolated from one another, each ignorant of the others' stands on the issues" (Schachter, 1991, p.89).

Table 1. Various terms for CF

Field	Term
Pedagogical field of second language teaching/learning	Corrective feedback
Linguistic field of language acquisition	Negative data or Negative evidence
Psychological field of concept learning	Negative feedback
