Abstract:

Supply chain management is a management of network relationships of organisations in pursuance of business process and performance improvement, while Industrialised Building System (IBS) is an alternative construction method towards sustainable and improvement of construction performance and image. Both concepts are related with movement of innovation to enhance the project delivery and performance in terms of cost reduction, quality, work environment, relationships, and productivity. Many efforts have been done in order to implement IBS in the Malaysian construction industry; unfortunately the process of implementation had faced a lot of hindrances. These hindrances arising from the supply chain include miscommunication, lack of coordination, lack of integration, lack of trust and negative attitudes. This paper through literature review aims to highlight all of these barriers and examines how far it affects the process of IBS implementation. Suggestions on how supply chain management practice could be implemented more effectively to pursue IBS implementation will be concluded.

Keywords: Supply Chain Management System, Industrialised Building System (IBS), Malaysian Construction Industry, Project Performance.
