

# Fluid Machinery For The Oil, Petrochemical And Related Industries: Fifth European Congress 17-19 May

## Global Corruption Report: Climate Change

The global response to climate change will demand unprecedented international cooperation, deep economic transformation and resource transfers at a significant scale. Corruption threatens to jeopardize these efforts.

Transparency International's *Global Corruption Report: Climate Change* is the first publication to comprehensively explore major climate-related corruption risks. The book provides essential analysis to help policy-makers, practitioners and other stakeholders understand risks and develop effective responses at a critical moment when the main architecture for climate governance is being developed. More than 50 leading experts and practitioners contribute, covering four key areas:

- Governance: Investigating major governance challenges towards tackling climate change.
- Mitigation: Reducing greenhouse gas emissions with transparency and accountability.
- Adapting to climate change: Identifying corruption risks in climate-proofing development, financing and implementation of adaptation strategies.
- Forestry governance: Responding to the corruption challenges plaguing the forestry sector, and integrating integrity into international strategies to halt deforestation and promote reforestation.

Transparency International (TI) is the global civil society organization leading the fight against corruption. Through more than 90 chapters worldwide and an international secretariat in Berlin, TI raises awareness of the damaging effects of corruption and works with partners in government, business and civil society to develop and implement effective measures to tackle it. For more information, go to [www.transparency.org](http://www.transparency.org).
